The receipt will say "Ticket Only"</small>

** The Nurit 3010 is a wireless terminal using a radio antenna and battery pack. The terminal will shut itself off for more than 1 minute. This conserves the battery power. To "wake" the terminal up, press . The terminal may say "Radio Init. Watting" while it registers with the network. Once the terminal has registered, the display should say "Credit... Sale, Account." This means it is ready to process cards. To charge the battery, plug the power pack into the terminal and into a standard power outlet. A battery status display is in the lower left hand corner of the terminal screen. A radio signal strength appears in the right hand corner of the screen, once the terminal has registered. A signal of at least 14 is recommended.
